

Headwall

The Headwall enables a creative room design using a flexible wall system and is designed in a combination of metal panels or melamine-coated chipboards. The non-porous, smooth melamine surfaces may be designed in various decorative plain colours and wood replications. A selection can similarly be made between various surface structures. The melamine-coated chip-

boards may be combined both with each other and also with wall panels with a metal or glass surface. The system enables flexible removal, re-installation and retrofitting of components, short conversion times and less dirt during modifications. A lasting design of the rooms is thus ensured.

Dimensions

| | |
|--------------|---------------|
| Panel width | max. 1000 mm |
| Panel height | room-high |
| Thickness | approx. 20 mm |

Colour

| | |
|---------------------|---------------------------|
| Plain colours | according to colour chart |
| Wooden reproduction | according to colour chart |
| Special decor | on request |

Structure

| | |
|---------------|-------------------------------------------------------------------------------------------|
| Wall covering | approx. 20 mm thick consisting of 19 mm chipboard with fastening clip screwed to the back |
| Weight force | without any additional cross-member of up to 600 Nm (60 kg/m ²) |

Technical data

| | |
|---------------------|----------------------------------------------------------------------|
| Material (formwork) | melamine resin coating |
| Material (core) | 19 mm chipboard |
| Surfaces | various glossy and matt surfaces, pearl, butt and wood pore textures |
